INVESTMENT STRATEGY

The WBI Bull|Bear Trend Switch US 1000 strategy optimizes risk and return for U.S. large-cap equity exposures. The quantitative equity model develops bull and bear indicators by evaluating changes in monetary policy, advisor opinion, advance decline ratios, earnings yield, and up/down volume. When conditions are deemed favorable, the strategy will invest in passive, large-cap ETFs. When conditions are unfavorable, the model will trigger a switch to cash or its equivalent.

BASIC FACTS

Year Firm Founded	1984

BULL|BEAR TREND SWITCH US 1000 SMA

WBI is an independent, privately owned investment management firm that is registered as an investment advisor with the U.S. Securities and Exchange Commission (SEC) and provides discretionary investment management to individuals, pension and profit sharing plans, charitable organizations, corporations, and other entities. WBI claims compliance with the Global Investment Performance Standards (GIPS®).

The WBI BullBear Trend Switch US 1000 strategy seeks long-term capital appreciation, with the potential for current income, while also seeking to protect principal during unfavorable market conditions. The WBI BullBear Trend Switch US 1000 strategy invests in equity securities or ETFs that WBI believes offer the potential for a high correlation to the performance of the broader U.S. large capitalization equities market when market conditions are considered favorable by WBI. WBI uses a rules-based methodology analyzing macro-economic factors and technical market trends including, among others, those relating to commodities, monetary policy, valuation, sentiment and change in interest rates, to assess risk and determine whether market conditions are favorable or unfavorable. When conditions are considered unfavorable by WBI, the portfolio will invest in cash, cash equivalents or ETFs with exposure to cash equivalents. The inception date of the investment strategy is July 1992 and the composite creation date is December 2018. The composite includes all discretionary accounts for which the client has selected the WBI BullBear Trend Switch US 1000 strategy as the objective. A complete list, description and GIPS compliant presentation is available for all composites on request by emailing WBI_Marketing@wbiinvestments.com.

IMPORTANT INFORMATION

Past performance does not guarantee future results. This is not an offer to buy or sell any security. No security or strategy, including those referred to directly or indirectly, is suitable for all accounts or profitable all of the time and there is always the possibility of loss. You should not assume that any discussion or information provided here serves as a substitute for personalized investment advice from WBI or any other investment professional. If you have questions regarding the applicability of specific issues discussed to your individual situation, please consult with WBI or your chosen professional advisor. This information is compiled from sources believed to be reliable, but accuracy cannot be guaranteed. Additional information about WBI's advisory operations, services, conflicts of interest and fees are in the Form ADV, which is available upon request or on the SEC's website at www.adviserinfo.sec.gov.

Market conditions may call for the Portfolio Strategy to remain in any of the possible exposure allocations for an extended period of time. At times, market conditions and the particular Portfolio Strategy will call for an allocation to cash or cash equivalents. If the Portfolio Strategy invests all or a substantial portion of its assets in cash or cash equivalents for an extended period of time, it could reduce the Strategy's potential return as the limited returns of cash or cash equivalents will lag other investment instruments in a strong market.

Net of Fee Performance is net of the maximum WBI investment management fee and includes reinvestment of dividends and other earnings. WBI uses a model fee approach which consists of netting down 100 bps from gross returns on a monthly basis. The net performance does not include the effect of advisory or solicitation fees charged by unaffiliated financial advisers that may introduce clients to WBI. WBI does not determine the fee charged by such financial advisers, nor does it retain any portion of such fee. Gross of Fee Performance is presented for comparison of manager performance, and excludes the effects of the investment management fees charged by WBI.

Indices are unmanaged and may not be invested in directly. Indices used to benchmark performance do not reflect the deduction of transaction and custodial charges or investment management fees, which would reduce performance results. Because the strategy involves active management of a potentially wide range of assets, no widely recognized benchmark is likely to represent performance of any managed account. WBI managed accounts may own assets and follow investment strategies which cause them to differ materially from the composition and performance of the benchmarks shown.

Alpha: measure of risk-adjusted excess return. Positive Alpha indicates the portfolio has performed better than its level of risk (measured by Beta) would predict. **Beta:** measure of volatility relative to an index; Beta above 1 is more volatile than the index; Beta less than 1 is less volatile. **Up and Down Capture Ratios:** used to evaluate how well a manager performed relative to an index during periods when the index is up or down. **Maximum Drawdown:** measures peak-to-trough loss of an investment, indicating capital preservation. **Standard Deviation:** measure of volatility; greater STD indicates a more volatile strategy or index during a given time period. **Russell 1000 TR Index:** measures the performance of 1,000 largest U.S. companies where dividends are automatically reinvested.

The Morningstar Rating™ for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life sub-accounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The Morningstar Rating does not include any adjustment for sales loads. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods. WBI BullBear Trend Switch US 1000 was rated against the following numbers of Tactical Allocation funds over the following time periods: 291 funds in the last three years, 240 funds in the last five years, and 118 funds in the last 10 years. Past performance is no guarantee of future results.
